

22nd STREET OVERLAY- GREELEY, CO

PROJECT DESCRIPTION

The City of Greeley is looking for innovative ways to **make their asphalt pavements more durable**, so they chose FORTA-FI® to reinforce their 22nd Street overlay. FORTA-FI® is a unique blend that **disperses uniformly** into asphalt mix to add **three-dimensional strength**. The project also used the automated **FORTA® Voyager fiber feeder to seamlessly introduce FORTA-FI® into their plant mixing process, requiring just one operator and zero changes to the plant's equipment**. The use of the Voyager allowed the operator to **easily program the fiber feed rate to match the plant's asphalt production rate**. Plant workers also commented on the **easy set up for the Voyager and its extreme accuracy**.

KEY POINTS

- Extended Life
- Reduced Cracking
- Voyager Used to Feed Fiber

DETAILS

Date: August 2017

Location: Greeley, CO

Tonnage: 2,500

Fiber: FORTA-FI®

Feeder: FORTA® Voyager

Distributor: Pacific GeoSource

**PACIFIC
GEOSOURCE**
