

CITY OF VINARICE - VINARICE, CZECH REPUBLIC

PROJECT DESCRIPTION

FORTA-FI® was used in a 7 cm (2.75") base and a 4 cm (1.5") wearing course on a steep, high volume, heavy truck access road. On the edge of a new residential project right next to the asphalt plant - asphalt mix is placed on compacted subgrade. The street is rather steep, leading from the plant exit straight down. **The street will be exposed to heavy loads of full trucks transporting asphalt mixes from the plant during the work week. The use of FORTA-FI® will aid in the crack reduction and extending the overall pavement life of this roadway.**

KEY POINTS

- Extended Pavement Life
- Reduced Rutting & Raveling
- Reduced Cracking

DETAILS

Date: October 2010

Location: Vinarice, Czech Republic

Tonnage: 300

Fiber: FORTA-FI®
