

CAPE CANAVERAL AIR FORCE FACILITY - BREVARD COUNTY, FL

PROJECT DESCRIPTION

The roadway into the Air Force facility at Cape Canaveral in Brevard County Florida was repaired and reinforced with FORTA-FI asphalt fiber. The road that was repaired is Highway 401, and the job consisted of side road entries, passing lanes, and exit lanes. This project was 3 miles long, used 13,000 lb of FORTA-FI, and was laid at a thickness of 2". This stretch of road had been experiencing alligator cracking, so the owners chose FORTA-FI to **reduce cracking** and **extend the life of the highway**. The paving crew had experience with using FORTA-FI and **used the FORTA Voyager** to feed the fiber into the asphalt mix. There were **no issues at the plant or at the worksite**. All involved with this project were happy with the outcome and looking to do more projects with FORTA in the future.

KEY POINTS

- Cost-Effective
- Reduced Cracking
- Extended Highway Life

DETAILS

Date: 2019

Location: Brevard County, FL

Tonnage: 13,000

Fiber: FORTA-FI
