

KOOIWEG ROAD - GIETHOORN, NETHERLANDS

PROJECT DESCRIPTION

FORTA-FI[®] was used in a pilot project for a road in Giethoorn, Netherlands. The 1,330 meter roadway experiences traffic from heavy agricultural truck traffic including tractors. The heavily cracked sections of the road were milled, filled, and then the entire road was paved with FORTA-FI[®] reinforced asphalt. **The use of synthetic fiber reinforcement helped to reduce project costs and reduce life cycle costs.**

KEY POINTS

- Extended Pavement Life
- Reduced Rutting & Raveling
- Reduced Cracking

DETAILS

Date: November 2017

Location: Giethoorn, Netherlands

Tonnage: 800

Fiber: FORTA-FI[®]

Contractor: Schagen Infra

Distributor: Dutch Fiber Trading

DUTCH FIBER TRADING
