

## OGDEN AVENUE - LAS VEGAS, NV

### PROJECT DESCRIPTION

Ogden Avenue in downtown Las Vegas receives a high volume of bus traffic. When it was time to repair the pavement in early 2013, FORTA<sup>®</sup> fiber-reinforced asphalt was used for the top 2.5" lift of a new 5" asphalt concrete section, constructed over 12" of new base. The fiber was added to the city's standard AC-30 mix at the plant via a fiber metering device (FMD). **The goal of the fiber-reinforced asphalt was to extend the life of the pavement and reduce the rutting caused by heavy buses.**

### KEY POINTS

- Extended Pavement Life
- Reduced Rutting & Raveling
- Reduced Cracking

### DETAILS

**Date:** January 2013

**Location:** Las Vegas, NV

**Tonnage:** 1,300

**Fiber:** FORTA-FI<sup>®</sup>

**Distributor:** Pacific GeoSource

**PACIFIC  
GEOSOURCE**
