

PENRIDGE DRIVE - CENTERVILLE, OH

PROJECT DESCRIPTION

The City of Centerville, OH chose FORTA-FI to **extend the life of their pavement** and **gain a better return on their investment** when paving multiple subdivision streets. On Penridge Dr., 18,000 lb of FORTA-FI was used in a 1 ½" thick overlay. A FORTA representative contacted the city engineer to explain the difference between a previously used competitor's fiber and FORTA-FI. The local producer confirmed the representative's statements made to the city and engineer, which led them to switch to FORTA-FI. The project was done using the **FORTA[®] Voyager** automated fiber feeder and was **executed flawlessly**. The **ease of adding fiber created six additional projects with the producer**.

KEY POINTS

- Cost Effective
- Reduced Rutting & Cracking
- Increased Durability

DETAILS

Date: April 2019

Location: Centerville, OH

Tonnage: 18,000

Fiber: FORTA-FI[®]
