

ROADWAY - QUARRYVILLE, PA

PROJECT DESCRIPTION

The Pennsylvania Department of Transportation (PennDOT) began a five-year study of Slurry Surfacing using reinforcement fibers. As a result, Surface-EXT was used in hopes of comparing the results to other methods. This study placed a Type 2 with 1% cement micro surfacing mix on a roadway in Quarryville, PA. The **user friendly** pre-chopped Surface-EXT strands were evenly dispersed throughout the mix and the **material flowed effortlessly during the micro surfacing application**. In addition to the road opening to traffic with no delays, **long-term durability was improved** and **reflective cracking was reduced**.

KEY POINTS

- User Friendly
- Improved Set Time
- Extended Life
