

## SPENCE STREET - LUFKIN, TX

### PROJECT DESCRIPTION

The City of Lufkin agreed to conduct a trial using FORTA-FI<sup>®</sup> included within the asphalt overlay. The project, located on Spence Street, opens up to both East Texas Asphalt's plant and a large shipping warehouse; wear and tear on the road is therefore significant. The FORTA-FI<sup>®</sup> sections were placed for the first two hundred feet and then a standard overlay mix was placed for the remaining length of road. **It is anticipated that both sections will experience the same amount of traffic. Apart from the addition of the fibers for the shorter FORTA-FI<sup>®</sup> section, the content of the asphalt mix produced at the plant was identical.** Similarly, the installation process of the asphalt itself was identical for both sections.

### KEY POINTS

- Extended Pavement Life
- Reduced Rutting & Raveling
- Reduced Cracking

### DETAILS

**Date:** 2014

**Location:** Lufkin, TX

**Fiber:** FORTA-FI<sup>®</sup>

**Distributor:** Pacific GeoSource
