

GENEVA ROAD - OREM, UT

PROJECT DESCRIPTION

The Utah Department of Transportation (UDOT) reinforced a slurry seal pavement application with Surface-EXT glass fiber for 10 miles of road. In total, 2,700 lb of the glass fibers were mixed with 700 tons of dry materials and the fiber was **evenly dispersed** into the slurry mix. The **user-friendly**, fiber reinforced slurry seal material **allowed for the roadway to reopen much earlier than anticipated while ensuring long-term durability and improving crack resistance**. The fiber material **required no changes to the normal mix** and had **good workability**.

KEY POINTS

- Excellent Workability
- Quick Road Reopening
- Reduced Reflective Cracking

DETAILS

Date: September 2012

Location: Orem, UT

Fiber: Surface-EXT[®]

Distributor: Pacific GeoSource
