

S 2700 WEST - WEST JORDAN, UT

PROJECT DESCRIPTION

When it came time to rehabilitate a heavily cracked section of S 2700W, West Jordan chose FORTA-FI[®] to reinforce the 2.5" polymer-modified PG64-28 HMA overlay. With high tensile strength fibers homogenously distributed throughout the asphalt mix, **the new pavement will be less susceptible to reflective, fatigue, and environmental cracking, reducing the City's future maintenance costs. Ultimately, the FORTAfi[®] asphalt will extend the useable life of this overlay and save money down the road.**

KEY POINTS

- Extended Pavement Life
- Reduced Rutting & Raveling
- Reduced Cracking

DETAILS

Date: 2014

Location: West Jordan, UT

Fiber: FORTA-FI[®]

Tonnage: 3,000

Distributor: Pacific GeoSource
